

Facilities Report September 2025

- Giant horse head is powered up and running, working on getting the final touches to the base completed.
- Several door repairs—including a mullion on a bottom bracket that was completely rotted away. Repairing frames where the metal isn't holding the screws from the years of strain on the parts.
- Temperature ups and downs, we came back to school with warm weather had everything cooling fine, it cooled down and now that it warmed up again, having all sorts of cooling issues...never a dull moment.
